

OUTDOOR

FAQ OUTDOOR LOGGIA

Terminology

What is Outdoor Loggia ?

Outdoor Loggia are Loggia panels, sliding or fixed, which can be integrated into an Outdoor patio cover (Camargue, Camargue Skye, Algarve and Algarve Canvas).

General

Can the Outdoor Loggia panels and the current Loggia panels be integrated in the same project?

This is not recommended, as there are too many visual differences between the two systems:

- gap between rails and panel differs, so the panel height will also differ
- different bottom rail
- frame mounted in mitre
- the old frame can be higher than 40 mm at the bottom and at the top, while the new frame is always 40 mm and the gap with the blades is filled with a filling blade

How long can I still obtain the current Loggia panels?

From September 1, the orders for patio covers will be provided with the new Outdoor Loggia panels.

Customers who already have Loggia panels in their patio cover and wish to order an additional Loggia wall can do so until the end of 2023. Please, contact your IAR, who will process the order for you.

Can I order the Outdoor Loggia for facade applications / through Structural Solar Shading?

No, these can only be ordered on RIO for integration into a patio cover. Structural solar shading loggias use different bottom and top guides.

Finishing

When will the vertical blade version we saw at Ambassador Days / in the product video be available?
At the Ambassador Days you saw a prototype, which is still being optimized. The Loggia Linea will be available in 2023, both with aluminum and wooden blades.

Can you also produce the Loggia panels in other types of wood?

No, this is not possible.

Can I choose on which side I want the button for rotating the Privacy blades, or can I operate it on both sides?

No. The control buttons are always on the inside of the patio cover. It is not possible on both sides of the panel or on the outside, unless you switch the panels.

Can I still turn / switch the panels?

This is possible: either the entire system is turned (in which case the panels that we place on the outer rail will be on the inside), or only the panels are turned.

In this case, the carriers must also be changed and the control button for the Privacy blades will be on the outside. For more information we refer to the installation manual on the Professional Portal.

Can the bottom rail be lacquered in the color of the patio cover?

The bottom rail cannot be lacquered, it is blank anodized to ensure proper sliding action.

How high is the bottom rail?

The bottom rail is 15 mm high.

Can the bottom rail of Loggia sliding panels be sunk into the terrace?

This is possible if you take into account when ordering that the panels must be slightly higher than the passage height of the patio cover. Drainage must also be provided for any water that may enter the recessed lower rail.

Can the gap at the bottom of the panels be reduced?

No. It takes into account the maximum possible deflection of the pivot.

Why do I need to leave a 2cm gap between the Loggia fixed walls and the columns?

This clearance is necessary to install the panels.

Can I open and close multiple hook locks with the same key?

No, this is not possible. Each hook-lock has its own unique key.

Why can't I order Loggias with cedar anymore?

Thermo-ash is a more stable product. It has undergone a heat treatment that has caused the wood to die and the blades to remain straight. When new, it is slightly darker than cedar, but thermo-ash will also gray evenly. The Modulo and Linarte wood inserts are also finished with thermo-ash, for one unique look and feel.

Does thermo-ash retain its dark brown color?

No. Thermo-ash will age over time.

What is Mixtrim fabric?

Mixtrim is a contemporary sunscreen fabric made from polyester and acrylic.

Are Mixtrim fabrics wind and waterproof?

Yes.

Do Mixtrim fabrics discolor in the sun?

No. They are weatherproof and specifically developed for outdoor applications.

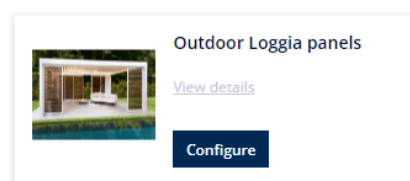

Can I order Fixscreen with the same Mixtrim fabric as my Loggia?

No. The fabric has different properties, which would cause problems when rolling up.

Input in RIO

Where can I order the Outdoor Loggia?

From July 1, you can order it as a showroom model or reorder it through RIO:

Why aren't quotations with Loggia automatically converted when ordered from September 1.?

It is important that you go through the new Outdoor Loggia flow in RIO to be informed about all the changes and novelties specific to Outdoor Loggia.
